Trans. of Akademiya Nauk SSSR. Doklady, 1957,
v. 112, no. 6, p. 1098-1100.DESCRIPTORS: *Minerals, Crystals, Hardness,
*Chemical bonds

From 1 mineralogical crystals, in which the inter-atomic
bonding, that is, the coordination number of
atoms and the same show that the crystals, which have
an essentially covalent state of bond, are harder than
those, where there prevails an ionic bond. At the same
time the relative difference increases with the increase
of the valence of the composing atoms and with the de-
crease of the inter-atomic distances.
